

Sieving & Screens

Rotary Vibrating Screen

Rotary vibrating screen is a high performance fine screening machine mainly used for grading, removing impurities and solid-liquid separation to improve product quality. Of which, sieve screen with a tightly controlled aperture size is essential to achieving a reliable, efficient screening outcome. Made of stainless steel woven wire cloth, our sieve screen has a mesh count of 3–508 mesh to satisfy different needs for powder sieving.

Benefits for sieving

- ✓ High strength and durable
- ✓ Good wear & corrosion resistance
- ✓ Low elongation and great stability
- ✓ Great high & low temperature resistance
- ✓ Great screening efficiency
- ✓ Wide range of mesh sizes
- ✓ Easy to clean and maintain

Specification

- Material:** 304, 316, 316L.
- Screen layers:** two or three.
- Mesh count:** 0.03–0.5 mm
- Mesh count:** 16–325 mesh
- Aperture width:** 0.043–1.19 mm
- Open screening area:** 30.4% – 61%

Stainless Steel Fine Mesh For Shale Shaker Screen

Applications

- Oilfield drilling
- Drilling mud solids control
- Drilling rigs
- Mine screening
- Coal cleaning
- Mining

Food industry

Chemical industry

Ceramic industry

Metallurgy
